# Presentation Script - AI Jukebox

## Video Presentation (2-3 minutes)

### Scene 1: Introduction (0:00-0:30)
"Hello! I'm [Your Name], and this is AI Jukebox - our submission for the Agentic Commerce o

**[Visual: App homepage with hackathon banner]**

"Today I'll show you how autonomous AI agents can make real financial decisions on-chain usi

### Scene 2: Problem & Solution (0:30-1:00)
"The problem: Traditional content curation relies on human decisions. Our solution: Autonomo

**[Visual: Before/After comparison]**

"AI Jukebox combines Gemini AI for content creation, autonomous agents for decision-making,

### Scene 3: Live Demo (1:00-2:00)
"Let me show you how it works..."

**[Action: Generate a song]**
"First, I describe a song. Let's try 'synthwave for night driving'..."

**[Action: Show AI generation]**
"The AI creates a complete song with metadata. Now watch the agent analyze it..."

**[Action: Show agent analysis]**
"The agent gives it an 87/100 score and recommends prioritization."

**[Action: Toggle autonomous mode]**
"In autonomous mode, the agent will automatically process a USDC payment..."

**[Action: Show transaction]**
"0.001 USDC sent, settled on Arc in under a second. The song moves to the priority playlist."

### Scene 4: Technology & Circle Integration (2:00-2:30)
"This works because of Circle's powerful products:
- Gemini AI for content
- Autonomous agents for decisions
- USDC for payments
- Arc for settlement"

**[Visual: Architecture diagram]**

"We built this in 48 hours using Next.js, TypeScript, and Circle's excellent documentation."

```

### ### Scene 5: Conclusion & Call to Action (2:30-3:00)

"AI Jukebox demonstrates the future of agentic commerce. Imagine this scaled to marketplaces

"Try it live at [\[URL\]](#), check our GitHub for code, and let's build the future of autonomous

"Thank you!"

---

## ## Slide Presentation (5-10 slides)

### ### Slide 1: Title

**\*\*AI Jukebox - Agentic Commerce on Arc\*\***

- Subtitle: Autonomous AI + USDC + Arc Blockchain
- Your Name & Team
- Hackathon Logo

### ### Slide 2: The Problem

- Traditional content curation is manual
- Human bias in content selection
- Slow monetization processes
- Limited scalability

### ### Slide 3: Our Solution

- **\*\*Autonomous Agentic Commerce\*\***
- AI-generated content + AI-driven decisions
- On-chain settlement with USDC
- Real-time, trustless operations

### ### Slide 4: Technology Stack

- **\*\*Frontend\*\***: Next.js 14, TypeScript, Tailwind
- **\*\*AI\*\***: Google Gemini API
- **\*\*Blockchain\*\***: Arc with USDC-native gas
- **\*\*Payments\*\***: Circle infrastructure
- **\*\*Deployment\*\***: Vercel

### ### Slide 5: How It Works

1. User describes song → AI generates it
2. Agent analyzes quality → Scores 70-100
3. If score > 80 → Auto-prioritize with USDC
4. Transaction settles on Arc → Song prioritized

### ### Slide 6: Circle Integration

- **\*\*Arc Blockchain\*\***: Settlement layer
- **\*\*USDC\*\***: Payment & gas token

- **\*\*Key Benefits\*\*:**
  - EVM compatibility
  - Sub-second finality
  - Stable transaction costs
  - Enterprise reliability

### ### Slide 7: Live Demo Screenshots

- Generation interface
- Agent analysis panel
- Transaction confirmation
- Priority playlist

### ### Slide 8: Business Impact

- New category: Agentic commerce
- Scalable micropayments
- Global accessibility
- Trustless operations

### ### Slide 9: Code & Deployment

- **\*\*GitHub\*\*:** [\[Link\]](#)
- **\*\*Live Demo\*\*:** [\[Link\]](#)
- **\*\*Video\*\*:** [\[Link\]](#)
- **\*\*Documentation\*\*:** [\[Link\]](#)

### ### Slide 10: Thank You & Q&A

- Contact information
- GitHub stars welcome!
- Questions?
